CRI Advanced Analytics

Transforming Insights Through Analytical Innovation

Advanced Data Science Applications

- Using data science methodologies (machine learning, AI, predictive/prescriptive analysis, etc.), we bring the highest forms of analytical capabilities to the table giving you the leading edge on latest advances in your field.

Custom Visualization Expertise

- Our experts present data in easy-to-understand visual output (charts, graphs, interactive visuals) so that you don't waste hours trying to understand what your data is telling you, and then risk false conclusions due to poor data presentation.

Data Integration & Consolidation

- Often, multiple data sources across many applications don't share a common link. Data integration and integrity are the most important and sometimes the most difficult obstacles to achieving high quality analytical solutions. Our experts can help build trustworthy data sources that house all of the data you require for your analysis.

In a world run by technology, innovation, and most importantly—data—we recognize that every organization has its own unique challenges in navigating the sea of data sources and applications that you rely on daily. We also know that when you're armed with actionable data, you can effectively prepare for future trends in your industry. The problem that occurs all too often is when countless hours are spent extracting data from multiple sources, consolidating, and then finally, analyzing, to gain that insight.

At CRI Advanced Analytics, we recognize that out-of-the-box analytical solutions are not always the perfect fit for your organization's needs and that fitting your business to a "one size fits all" solution isn't ideal. With a customized solution, you only get what your organization needs so that you don't end up paying for useless features. Our analytical solutions, much like a custom-tailored suit, are designed specifically to match the needs of your business.

Our approach for delivering our solutions is not the norm—we involve you at the conceptualization phase so that your solution is designed to fit your organization's needs, thus providing insights specific to your operations that will impact your business and overall health of your organization.

Whether you need a small enhancement to your analytical capabilities or a customized overall solution, CRI Advanced Analytics can help you not only meet your goals but far surpass them.
